## Driving Tips for Driving in the Rain

**Rainy driving tips** - Slow down! People are so used to driving certain speeds on certain roads that sometimes they forget the need to slow down when inclement weather presents itself.

**Before you go** -. When you begin a journey in rain, your shoes will be wet and liable to slip off the pedals. Scuff the soles on the rubber matting or carpeting of the car before you start the engine.

**How are your tires?** - Check your tires on a regular basis. Bald tires significantly reduce your traction on wet roadways, and offer little resistance to hydroplaning.

**Turn on your wipers** - Replace your wipers regularly, at least once a year. Wiper blades in bad condition don't clear water from the windshield very well and distort your view. Don't follow large trucks or busses closely. Splash and spray from these vehicles can obscure your vision, creating a potentially disastrous driving situation. Keep your distance, and your windshield wipers on, when other traffic is in front of you.

**Turn on your lights** - Whenever visibility is poor or it rains, headlights are a good way to let other drivers know where you are.. Remember, you are not the only one affected by poor visibility. California requires headlights to be turned on when it is raining or when visibility is reduced to less than 500 feet.

**Heavy rain** - Heavy rain can overload the wiper blades, allowing an almost continuous sheet of water to flow over the screen. When visibility is so limited that the edges of the road or other vehicles cannot be seen at a safe distance, it is time to pull over and wait for the rain to ease up.

**Foggy windows** - Rain or high humidity can quickly cause windows to mist up inside the car. In a car equipped with air conditioning, turn up the heat and direct the airflow to your defrosters with the AC switch engaged.

**Handling a skid** - Losing control of your car on wet pavement is a frightening experience. You can prevent skids by driving slowly and carefully, especially on curves. Brake before entering the curves. Steer and brake with a light touch. If you find yourself in a skid, remain calm, ease your foot off the gas, and carefully steer in the direction you want the front of the car to go.

**Driving through Water**- Stop the car and check the water level before proceeding. Generally, if the water is deeper than the bottom of your doors or the bottom third of your wheels, it is inadvisable to attempt driving through it.

**Check your brakes** - If you successfully pass through a deep water hazard, test your brakes. They may be saturated, and only driving very slowly and braking lightly at the same time will generate enough heat to dry them out. Be sure they are pulling evenly on all wheels before building up speed again.
